

Mini 4GB USB Memory Stick Digital Voice Recorder UltraDisk DVR10 Instructions

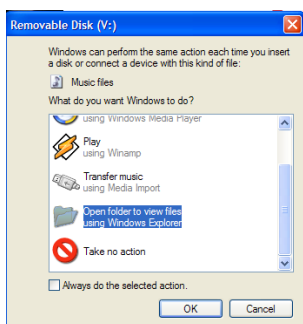

Do not mistake this product for a normal USB Data Memory Stick it is a covert USB Digital Voice Recorder. The UltraDisk 10 USB dvr10 memory stick Voice Recorder is cleverly disguised to appear and operate as a fully functional memory stick but it's real use is to capture audio from those important meetings, lectures, interviews, dictation or verbal disagreements with the flick of a switch. Built in time synchronisation helps you keep track of when (date/time stamp) the recording was made and how long it is.

Our Covert UltraDisk usb dvr10 memory stick Voice Recorder is plug and play, so you do not need any special drivers to make it work. To recharge the device and/ or playback the stored recordings simply insert the datastick into your PC and it will automatically open the Windows Media Player. The recordings can also be saved to your PC or saved for later use.

To record on the UltraDisk DVR10 usb digital voice recorder you need to ensure that the device is charged in your pc. Insert the USB recorder into your usb slot on your pc and left to fully charge for approx 2-3 hours.

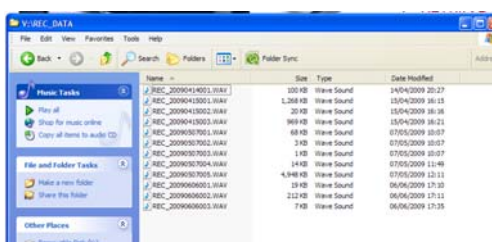

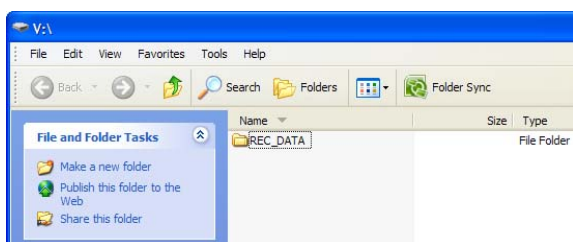

To start recording, remove the charging device from the pc and slide the switch back towards the keyring loop, you will see the led indicator go blue and then flash red discreetly, when it is flashing it is recording, to stop recording simply slide the switch forward again to stop.

The recordings are stored in WAV format and can be played back on any windows pc without issue, defaulting to play in windows media, or any other media player you may have installed. When you insert the usb device into the pc, you will be prompted by windows for an action.

When prompted, select the option to open the folder containing the files and view them. It will be called something like REC_DATA in here you will find your recordings made. You can play / delete these files as with any other USB device.

Normally WAV files will be defaulted to play in windows media player, or may be played in your default media player.

- Recordings are started instantly and silently by using the switch on the side.
